

FireClass 32

Overview

The FireClass 32 digital addressable panel has been designed to work with FireClass protocol devices. The panel is powerful, user friendly and designed and manufactured to a high standard and certified to CPD and EN54, Parts 2 & 4. The panel operation provides considerable processing ability enabling highly definable cause and effect programming either local to the panel or network wide and also between our FireClass64 and 240 range of panels.

This panel is ideally suited to installations which require powerful and comprehensive sounder and control/shutdown functions or can be used as a standalone system for monitoring site wide inputs or outputs. The panel is programmed to operate to specific site requirements by means of a powerful yet easy to use software tool which can be programmed at a basic level at the panel or with our FireClass software editor.
